Winnipeg : 204 632-6249

Moncton : 506 383-4265
Vancouver : 604 576-3631

For additional information on trainings, contact your regional office.

COURSE DESCRIPTIONS

Basic Techniques (Beginner)

This course is for apprentice installers as well as for experienced installers not familiar with basic modified bitumen membrane products. It will give installers who have some experience but who have never participated in an official training course the opportunity to review their knowledge and validate the practices they have acquired on the job.

During this course, participants will receive information on Soprema products, their properties, worksite safety precautions, industrial requirements as well as classroom instructions and hands-on training on application methods.

At the end of the course, participants will have the basic knowledge required to install commonly used systems, i.e., hot asphalt-applied, thermofused, and self-adhesive membranes. Specific installation techniques for mechanically fastened membranes will also be covered.

Advanced Techniques (PAQ+S)

This course is for 2 years or more experienced installers and other professionals who wish to receive more in-depth training on the systems developed by Soprema in recent years.

The purpose of the course is to familiarize participants with high performance systems and enable them to refresh their knowledge of elastomeric bitumen membrane installation techniques.

During this course, participants will receive classroom instructions on installation safety precautions, Soprema materials, and installation techniques. In addition, practical hands-on exercises will be used to expand their expertise with membrane installation procedures.

This course is the mandatory step for those who wish to apply for Programme of Affiliation for Quality + Safety (PAQ+S) accreditation. In this case, there will be a written exam at the end of the course.

Cold-Applied Systems

This course is for installers and contractors who wish to familiarize themselves with some elastomeric bitumen products that are applied without a propane torch.

The purpose of the course is to provide participants with in-depth knowledge of self-adhesive membrane systems (COLPHENE), adhered membrane systems (COLPLY) and liquid waterproofing coating (ALSAN FLASHING). During this one-day training course, participants will be given the opportunity, through hands-on workshops, to practice the application techniques for these various systems.

Air Barrier / Below-Grade Waterproofing

This course is for installers as well as for consultants who wish to familiarize themselves with the installation of air barriers or below-grade membranes as part of the building envelope. It will give installers who have some experience but who have never participated in an official training course the opportunity to review their knowledge and validate the practices they have acquired on the job.

During this course, participants will receive information on membranes, their properties, worksite safety precautions, as well as hands-on training to practice the installation techniques.

At the end of the course, participants will have the basic knowledge required to install thermofused, self-adhesive and liquid membranes.
