| Revision Date: | -- |
| Reappraisal Date: | 2020-12-18 |

MODIFIED BITUMEN SYSTEM; SOPRABOARD / INSULATION / XPRESS BOARD

(PARS) PARTIALLY ATTACHED (HYBRIDE) ROOFING SYSTEM

Roofing System Summary

| | |
|----------------------|---------------------------------------------------------------------------------------------------------------|
| Cap sheet membrane: | Modified bitumen membrane / Torch applied |
| Base sheet membrane: | Modified bitumen membrane / Torch applied |
| Cover board: | Semi-rigid board composed of a fortified asphaltic core / Adhered |
| Insulation: | Polyisocyanurate foam insulation board / Adhered |
| Vapour barrier: | N/A |
| Thermal barrier: | Composite board consisting of a bitumen membrane laminated on top of a rockwool board / Mechanically fastened |
| Decking: | Steel deck |

Dynamic Uplift Resistance (DUR) as per CSA A123.21

| System Designation | Measured Value | Computed Value (To Include 1.5 Experimental Factor) |
|--------------------|--------------------|--------------------------------------------------------|
| A | -2,9 kPa (-60 psf) | -1,9 kPa (-40 psf) |
| B | -4,3 kPa (-90 psf) | -2,9 kPa (-60 psf) |

| INSULATION (Top Row) | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|---------------------------|
| TESTED PRODUCT: Polyisocyanurate foam insulation board laminated on both sides with fiber reinforced organic felt. | | |
| System | Application Method | Fastening Rate |
| A | Adhered | Ribbons at 305 mm (12 in) |
| B | Adhered | Ribbons at 152 mm (6 in) |
| ELIGIBLE THICKNESS(ES) | | |
| 38 to 102 mm (1½ to 4 in) | | |
| FASTENING METHOD | | |
| Duotack adhesive | | |
| FASTENING PATTERN | | |
| <p>System A</p> <p>The diagram shows a square fastening pattern for System A. The overall dimensions are 1.220m by 1.220m. Three horizontal fastening ribbons are shown, each 0.076m wide. The ribbons are positioned 0.305m apart from each other. The top ribbon is 0.153m from the top edge, and the bottom ribbon is 0.152m from the bottom edge.</p> | | |

System B

| THERMAL BARRIER | | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|----------------|
| TESTED PRODUCT: Composite board consisting of a non-woven polyester reinforced modified bitumen membrane factory applied to a high density insulation rockwool board, the top surface is sanded. | | |
| System | Application Method | Fastening Rate |
| A, B | Mechanically fastened | 305 mm (12 in) |
| ELIGIBLE THICKNESS(ES) | | |
| 15,9 mm (5/8 in) | | |
| FASTENING METHOD | | |
| Screws and plates | | |
| FASTENING PATTERN(S) | | |
| <p>System A</p> <p>The diagram shows a rectangular fastening pattern for System A. The overall dimensions are 2.440m in width and 0.914m in height. The fasteners are arranged in a grid with a spacing of 0.305m between them. The spacing from the left edge to the first fastener is 0.152m, and from the last fastener to the right edge is 0.153m. There are 10 fasteners in total across the width.</p> | | |

| Soprema | Duotack | | |

Roof Testing Laboratory

Roof System Dynamic Wind Uplift Resistance Results

SOPI-210663-10 / SOPI-216806-T4

General Notes

1. Decking:

Tests were performed over a standard roll formed steel deck profile, with a galvanized or aluminum / zinc alloy coating finished, as per ASTM A653, A792, A1008 or CSSBI 10M standards, bearing a thickness of 0.76 mm (0.03 inch) minimum (commonly defined as 22 gauge), corresponding to the ASTM A653M grade SS 230, having a yield point of 230 MPa (33 ksi) and a tensile strength of 310 MPa (45 Ksi). Tests could be performed on concrete deck or standard 4' x 8' x 5/8" plywood deck to assess eligibility for possible equivalencies.

The deck's fastening to the supporting structure must be strong enough to resist wind uplift loads (as defined per NBC requirements).

2. Deck equivalency products:

18 to 22 gage steel deck. Wood or concrete deck which testing gave equivalent or superior uplift resistance than the value specified in the "Fasteners Pull Out Resistance" section.

3. Fasteners Pull Out Resistance:

Testing were conducted in laboratory according to ANSI/SPRI FX-1 2011 standard, over a minimum of 10 test samples on a **Com-Ten** apparatus over steel deck (unless stated otherwise).

4. Adhesive Pull Resistance:

Testing were conducted in laboratory over 3 test samples, according to ANSI/SPRI IA-1 2010 standard on a **Com-Ten** apparatus over steel deck (unless stated otherwise) or, according to ASTM D1623 standard over a universal press testing bench, for in-between materials.

5. Note on adhesive:

Follow all guide lines or supplementary instructions from the manufacturer regarding adhesive application.

6. Equivalent products:

Only the products listed in this report under eligible products are deemed acceptable as substitute to the tested products. Any other modifications must be requested in written, on **EXP** application form, to be studied for approval.

7. Optional components:

Any components of this roofing system listed as optional, may be removed from the roof design. Inclusion or exclusion of the said component having no effect on the published dynamic uplift resistance results. (DUR).

8. Experimental factor:

In accordance with CSA A123.21 standard, the published dynamic uplift resistance (DUR) include a computed experimental factor of 1,5.

9. Building Wind Load Calculation:

An online calculator is available at <http://www.exp.com/fr/rooftesting>.

The calculator will compute, the Wind Load of any given building, for field, perimeter and corners, as per 2015 CNB requirement, without experimental factor. It will also compute perimeter's and corner's zone dimensions.
